

— CONFIGBUILDER 5

ATM Configuration Made Simple, Smart, and Secure.

ConfigBuilder 5 (CB5) gives banks and ATM operators a modern, secure way to create, edit, and maintain state-driven ATM configuration files. Built on decades of Paragon ATM expertise, CB5 simplifies and speeds up ATM configuration management while helping organizations streamline operations, reduce errors, accelerate changes, and extend the lifecycle of their existing ATM infrastructure.

Streamline ATM Configuration Management for Your Business

Across the globe, thousands of ATMs in the field still rely on the legacy "states and screens" architecture. Replacing that infrastructure isn't always necessary — or practical. ConfigBuilder 5 brings modern tools to enhance the capabilities of the environment you already have.

With its intuitive Windows-based interface, CB5 makes it easier to visually create, edit, validate, and maintain ATM configurations. The result: a faster, more reliable and more secure delivery process, with fewer errors, greater consistency, and less operational risk.

CONFIGBUILDER 5: ACCURACY, EFFICIENCY, AND CONFIDENCE

ConfigBuilder 5 modernizes how "states and screens" ATM configurations are created and managed. Its intuitive, visual environment makes it easier to design and validate ATM screens and state changes, identify errors before deployment, and maintain consistency across mixed-vendor fleets.

CB5 simplifies and speeds up ATM configuration management to reduce operational risk, minimize rework, and ensure a superior customer experience with every ATM transaction.

For Your ATMs

Keep your ATM configurations current and consistent while quickly responding to new business, security, compliance, and customer-experience requirements.

For Your Team

Give your resources an intuitive, point-and-click environment with embedded help that increases staff productivity, improves build quality, and reduces training overhead.

For Your Business

Respond faster to changing business requirements, reduce configuration errors, maintain industry compliance, and extend the useful life of your existing ATM investment.

ConfigBuilder 5 Highlights

01. Modern Application Architecture

- Windows-based desktop application
- Enhanced security and permission management
- Streamlined installation and activation

02. Simple, Intuitive User Interface

- Easy to navigate and use
- Embedded online help
- Reduced training overhead

03. Point-and-Click Configuration

- Easily create and manage ATM config files
- Quickly and easily refresh screen graphics, visuals, text, etc.
- Maintain consistent branding across devices

04. Broad Industry Compatibility

- Supports Windows-based ATMs from NCR and Diebold Nixdorf
- Integrates with ATM host systems like BASE24, Connex, or Postilion
- Works with most existing ATM config files

05. Compliance and Risk Management

- Helps support accessibility and security requirements
- Quickly update ATM graphics, screens, and multilingual text
- Maintain brand consistency across mixed-vendor fleets

Protect Your Existing ATM Investments and Prepare for What Comes Next

ConfigBuilder 5 enables users to quickly and easily build and validate ATM load files directly from a PC or workstation. Its modern application environment simplifies and accelerates the process of creating, editing, validating, and deploying ATM configurations.

Backed by more than 30 years of payment testing expertise from Paragon Application Systems, CB5 helps banks and ATM operators improve quality, increase productivity, reduce risk, respond faster to changing business requirements, and extend the lifecycle of their existing ATM infrastructure.
