

— WEB FASTEST

Meets All Your Payment Testing Needs

No matter if your testing resources are down the hall, spread across the country or deployed around the globe, all they need is a simple web browser for anytime, anywhere access to the Web FASTest environment.

Robust out-of-the-box functionality, along with centralized control of user roles, permissions, and data, means that your organization will be able to expand test coverage, improve quality, increase collaboration, and boost productivity.

Automation Enhances Your Testing Capabilities

As the world of digital payments continues to evolve rapidly, ensuring the security, efficiency, and accuracy of your payment testing operation has become more important than ever. While manual testing is still necessary and important, the effective use of automation can expand test coverage, improve consistency, and help your team complete testing activities more efficiently.

Designed for teams that require reliable and repeatable payment testing results.

The Web FASTest platform complements and extends your manual testing activities, providing flexible automation options that expand test coverage, improve accuracy, and speed up delivery timeframes - enabling your resources to get more done in less time.

A proven platform for comprehensive payment testing!

Web FASTest has been specifically designed and built to simplify day-to-day payment testing and certification activities and certification processes used by financial institutions, processors, networks, retailers, and payment technology providers worldwide.

WebFASTest provides 24x7 access and self-service capabilities for the messages that make up a digital payment transaction for any given specification, including EMV contact and contactless processing, giving users the visibility, control, and operational confidence needed to support their unique certification and validation requirements.

Enhance Your Payment Testing Processes

Availability

All your resources need is a simple web browser to access the testing environment 24x7x365. With no local software to maintain, your system is always current with supported updates and payment industry mandates.

Automation

Automated testing means that your resources can get more done in less time, increasing productivity, improving accuracy, expanding test coverage, and reducing project delivery timeframes.

Collaboration

Web FASTest helps improve cooperation and communication between groups, teams, even business units. Tests, media, results, and reports are quickly and easily shared across internal and external stakeholders.

Control

Web FASTest facilitates centralized administration of user roles, permissions, test data, results, and reports, helping organizations maintain consistency across testing activities.

Functionality

Support for a broad range of issuer and acquirer message specifications, combined with message validation, bit-level editing, pre-certification scripts, and sandbox options provide the tools for testing success.

Productivity

A common user experience across functional, regression, and performance testing areas reduces administrative overhead, minimizes training requirements and improves resource utilization.

Request a Consultation

Discuss your current testing requirements and challenges with an experienced Paragon product consultant.
