

Why You Should Choose **CONFIGBUILDER 5**

1

Modernization Without Infrastructure Change.

ConfigBuilder 5 modernizes ATM configuration management without forcing infrastructure changes, giving banks and ATM operators a faster, more reliable way to design, validate, and maintain ATM load files.

2

Visual Design and Validation.

Teams can visually design and validate ATM screens and state changes, identify and correct errors before deployment, and maintain consistency across mixed-vendor fleets.

3

Broad Industry Compatibility.

Supports Windows-based ATMs from NCR and Diebold Nixdorf, including legacy Wincor emulation environments, integrates with host systems like BASE24, Connex, or Postilion, and works with most existing ATM config files.

4

Compliance and Risk Management.

Comply with accessibility and security standards, quickly update ATM graphics, screens, and multilingual text, and maintain brand consistency across mixed-vendor fleets.

Talk to an Expert

Why ConfigBuilder 5 Exists — and What It Delivers

ConfigBuilder 5 exists to modernize how "states and screens" ATM configurations are created and managed. CB5 provides a modern, secure, and user-friendly Windows-based application environment where teams can visually design and validate ATM screens and state changes, identify and correct errors before deployment, and maintain consistency across mixed-vendor fleets.

WHAT IT MEANS FOR

You

Ensures ATMs in the field always operate correctly and consistently, but can be easily updated to support new business requirements and innovations on a timely basis.

Your Team

Simple to use, intuitive user interface with online help reduces training requirement for new resources, increasing staff productivity, and improving overall build quality.

Your Business

Enables quick updates to ATM configuration files in response to dynamic security and compliance requirements, reducing organizational risk and lowering operational costs.

WORKS WITH YOUR ESTATE

NCR
